

IMPORT DATA USING TRANSFORM MAPS (SPREADSHEET)

PROJECT DESCRIPTION:

- This project focuses on **importing data from a spreadsheet into ServiceNow using Import Sets and Transform Maps**.
- The objective is to efficiently migrate external data, such as employee, user, incident, or asset information, into the appropriate ServiceNow tables while ensuring data accuracy and consistency.
- The project involves uploading spreadsheet data through an **Import Set**, creating a **Transform Map** to map source fields to target table fields, and using transformation logic to validate, clean, and transform the data before insertion.
- It also demonstrates how to handle field mapping, data validation, duplicate records, and transformation errors.

TIME DURATION: 12 hours

Milestone 1 : Creation Of Spreadsheet And Table

❖ Creation Of Spreadsheet

Prepare the sheets

1. Open New Google Spreadsheet
2. Create New Google Spreadsheet with sample data as shown below

+ Sample 20 ☆ 📁 ☁ File Edit View Insert Format Data Tools Extensions Help 🔍 ↶ ↷ 🖨 🔗 100% ⌵ \$ % .0 ↶ .00 ↷ 123 Defaul... ⌵ - 10 + F7 ⌵ fx

3.Download the spreadsheet as Sample Spreadsheet.xlsx format.

❖ Creation of Tables

Create new Custom table

Navigation:

1.Tables > Create New

2.Label: Employee Test Name: u_employee_test

3.After creating and saving the Employee Test table

4.scroll down and go to related links

5.click on show form

<

≡

Table
Employee Test

A table is a collection of records in the database. Each record corresponds to a row in a table, and each

* Label

Employee Test

* Name

u_employee_test

Columns

Controls

Dictionary Entries

	Column label	Type	Reference
	Created	Date/Time	(empty)
×	Employee ID	String	(empty)
×	Department	String	(empty)
	Updated by	String	(empty)
	Updates	Integer	(empty)
	Sys ID	Sys ID (GUID)	(empty)
	Updated	Date/Time	(empty)
×	Location	String	(empty)

6.On the form, locate the **Form Context Menu / Additional Actions** option on the left side of the form header.\

7.Click the **Form Context Menu / Additional Actions** icon.

8. Click configure, select **Form Layout**.

9. The **Form Layout** page will open, where you can configure the fields displayed on the form

10. After opening **Form Layout**, click **New** to create a new field.

11. Enter the field details:

Column Label: Employee ID

Type: String

Click **Add** to create the field.

12.Repeat the same steps to create the following fields:

Employee Name – Type: String

Email – Type: String

Department – Type: String

Location – Type: String

13.After creating all the required fields, click **Save**.

14.Verify that the newly created fields are displayed on the **Employee Test** form

8.Newly Created Excel Data is this.

9.It is the previously added data.

10.Now, In this new data we added 4 rows of the 2 rows with the same existing data with different Name changed and Email changed.

11.That Raviteja Employee Email was Changed to

[test10@gmail.com → test18@gmail.com].

12.And Employee ID with SB-0004 name was changed to

[Ajay kumar → Ajay].

13.And two other new Employee ID's are added.

14.Now after submitting the form it appears as State Completed and Success.

Progress

Name	ImportProcessor
State	Complete
Completion code	Success
Message	Processed: 11, inserts 11, updates 0, errors 0, empty and is

Next steps...

[Import sets](#) Go to the import sets for this data load

[Loaded data](#) Go to the newly imported data inside the staging table: u_employe

[Create transform map](#) Create a transform map for the newly staged data

[Import log](#) View the import log

15. Now Click the Run transform Under the next steps.

16. Then it opens Specify Import set and transform map which is previously selected transform map then Click Transform button.

 Specify Import set and Transform map

* Import set

Next steps...

[ISET0010004](#) Go to the import sets for this data load

[Transform history](#) Show the transform history, related errors and log

[Import log](#) View the import log

17.Now the State is completed and Success.

18.Now again click on the Transform history then it shows the newly added data and its status of Inserted and Skipped values out the given data.

19.From the above figure : total 4 rows are uploaded out of 2 are Inserted that are two new ID's.

20.And 2 rows are updates that are Same ID's with different Name and different Email that we changed.

21.Then Open the Employee Tests table and see the rows updated and inserted.

22.Now Repeat the Phase 7 with the same steps and same Excel sheet and Submit to check how many rows are updated and Inserted with the same data.

23.Then Open the Transform history to check

24.Here we can see the total 4 are uploaded.

25.On that 0 rows are Inserted and updates 0 and Ignored 4 rows.

26.That same sheet we uploaded to the same transform map we create

Milestone 4 : Creation Of reports & dashboards

❖ Report 1

Create Reports on Employee Test Table

Navigation Steps :

- 1.Open All menus, Search for **Reports**.
- 2.Under **Usage and governance** Select Reports.
- 3.Click the **New** button to create a new report.

Report 1: Employees by Department

- 1.In Data
- 2.Report name : **Employees by Department**.
- 3.Source Type : **Table**.
- 4.Table : **Employee Test**, Now click the Next button.

- Now Add the Dashboard that you created called **Employee Analytics Dashboards**.
- Then Click **Add** button.
- Now the **Report** is added to the **dashboards**.

- From the + icon also we add widgets that our reports from there.
 - If we want we can also configure the background color
 - Here the three Reports are added successfully by varying **Department , Location and List Report.**
 - We can also restrict the **Users,Groups and Roles** From Share Option.
-

ADVANTAGES:

- Imports large amounts of spreadsheet data quickly.
- Maps spreadsheet fields to ServiceNow fields easily.
- Reduces manual data entry.
- Helps identify and avoid duplicate records.
- Allows data to be transformed during import.

DISADVANTAGES:

- Incorrect data can cause import errors.

- Requires some ServiceNow knowledge to configure
- Incorrect mapping can update the wrong data.
- Large imports may take more time to process
- Transform Maps may need maintenance when data formats change.

PROJECT OUTCOME:

- ✓ Successfully imported spreadsheet data into ServiceNow using Import Sets and Transform Maps.
- ✓ Mapped source spreadsheet fields to the appropriate target table fields.
- ✓ Applied data transformation and validation during the import process.
- ✓ Reduced manual data entry and improved the accuracy of data migration.
